

Using Langflow and ICEPOT to create a TestCase Generator AI Agent

Created the TestCase Generator AI Agent Using ICEPOT and Langflow:

Added a Dark Mode Filter to the Application:

Using Langflow and ICEPOT to create a TestCase Generator AI Agent

Added a Feature to Export the generated Test Cases to a desired format available: (Exported as a PDF in this demo):

The screenshot displays the 'Testcase Generator' web application, an AI-Powered Test Case Creation Assistant. The interface features a purple header with the application name and a yellow sidebar on the left. The main content area is white and contains two sections: 'Troubleshooting 403 Error' and 'How to Use the Chat Interface'. The 'Troubleshooting 403 Error' section lists five steps to resolve a '403 Forbidden' error, including enabling CORS in Langflow and setting environment variables. The 'How to Use the Chat Interface' section provides four instructions: clicking a toggle button, typing requirements, AI-generated test cases, copying to clipboard, and clearing chat history. On the right side, there is a 'Recent Download History' pop-up showing a file named 'test-cases-178402730588' (467 KB, 8 minutes ago) and a 'Full Download History' link. Below this is an 'Export Test Cases' panel with buttons for PDF, Word, CSV, Text, and Markdown. At the bottom right, there is a chat input field with the placeholder text 'Type your test case requirements...' and a 'Send' button. The browser's address bar shows the URL: '/Users/ajayuchiha/Desktop/Gen%20AI/Phase%202/Week%202/Day%202/Implementation%204/testcase-generator.html'.

AI-Powered Test Case Creation Assistant

Troubleshooting 403 Error
If you see "403 Forbidden" error:

1. Make sure Langflow is running with CORS enabled
2. **Option A:** Set environment variable before starting: `export LANGFLOW_BACKEND_CORS_ORIGINS="*"`
3. **Option B:** Restart Langflow: `langflow run --backend-cors-origins "*"`
4. Check browser console (F12) for detailed error messages
5. Verify the API endpoint is correct and the flow ID matches

How to Use the Chat Interface

- Click the toggle button (top right) to open/close the chat interface
- Type your requirements, user stories, or specifications
- The AI will generate comprehensive test cases for your application
- Copy generated test cases directly to your clipboard
- Clear chat history anytime to start fresh

Title: Successful login with valid credentials

Preconditions: Subscriber is registered with a valid email and password

Steps:

1. Navigate to Health Insurance login page
2. Enter valid email and password
3. Click on Login button

Expected Result: Subscriber is logged in successfully and dashboard is displayed

TC_HI_002

Title: Invalid password login attempt

Preconditions: Subscriber is registered with a valid email and invalid password

Steps:

1. Navigate to Health Insurance login page
2. Enter valid email and invalid password
3. Click on Login button

Expected Result: Error message is displayed indicating incorrect password

TC_HI_003

Title: Email not registered login attempt

Preconditions: Subscriber is not registered with the provided email

Steps:

1. Navigate to Health Insurance login page
2. Enter unregistered email and valid password
3. Click on Login button

Expected Result: Error message is displayed indicating email not registered

TC_HI_004

Title: OTP authentication successful login

Preconditions: Subscriber is registered with a valid email and password, and OTP is sent to registered mobile number

Steps:

1. Navigate to Health Insurance login page
2. Enter valid email and password
3. Click on Send OTP button
4. Enter OTP received on registered mobile number
