75

High severity

Overall visual regression score (0-100)

The visual regression analysis returned a score of **75**, placing it in the **High** severity band. Ten high-severity findings were identified, primarily involving missing elements and layout inconsistencies between the overview and detailed screenshots. Key missing components include the Submit button, Password field, and several user-profile controls. Immediate remediation is recommended to address these critical UI discrepancies.

Run Analysis **Run another analysis**

✓ 0 Low severity
Overall visual regression score (0-100)

Executive Summary: The visual regression assessment returned a score of ****0 (Low)****, indicating no critical issues detected. The pixel mismatch percentage is ****0.14 %****, well within acceptable thresholds for visual fidelity. No additional findings were reported, confirming the UI remains stable and consistent.

4. Hybrid Analysis:

Added a Execution Sequence viewer while it is analysed:

▲ 39

Medium severity

Overall visual regression score (0-100)

The visual regression analysis returned a severity score of **39**, placing it in the **Medium** band. The pixel mismatch is low at **1%**, yet **four** significant findings were identified: high-severity text changes in the payment-plan dropdown and primary action button label, a medium-severity label change for the country-field checkbox, and a high-severity background color shift of the primary button from blue to red. These changes could affect user experience and warrant review. Overall, the report indicates moderate risk that requires attention.

Visual Regression Implementation & Enhancements

Other Enhancements:

Added a slider option to slide between the baseline and current image:

Baseline vs. Current
